

FOR IMMEDIATE RELEASE

i2S offers new digitizing solutions to better answer several markets segments applications

i2S DigiBook will exhibit new dedicated products and solutions adapted to different uses and markets at CeBIT, booth 53, Hall 3, on March 3-8 2009 in Hanover, Germany.

Pessac, France – February 25, 2009: i2S DigiBook, a world leader in digitizing systems and solutions will launch the e-Scan, CopiBook HD and Scan2page products.

The ultimate self-service book scanners: e-Scan

e-Scan is a compact and stand alone station that offers self-service scanning for the public market. This ultimate scanner enables to make a professional scanner, easily and fast for anybody who has some pages to scan. The kiosk allows fast and easy scanning, of any kind of books and bound document including fragile documents up to A3++ format. This new product has been designed to be used in a self-service environment, for students in university libraries, employees in large companies, administrations, archives...

The high resolution scanner: CopiBook HD

CopiBook HD, the ultimate scanner of the CopiBook range, guarantees a really UV/IR free system, no visual disturbance for the users, no lighting consumables and less energy consumption. With a 400 dpi / 600 dpi resolutions, CopiBook HD is the most productive A2 format colour scanner of the market (scanning time for an A2 format document in colour at 400 dpi is 5.6 seconds). CopiBook HD is dedicated for a professional high quality standard use (ex: archivists), to preserve and digitize precious bound documents.

The scanner dedicated to newspapers: Scan2Page

i2S will officially launch Scan2Page, a scanner made by Swiss company Assy, perfectly adapted to digitize newspapers. For all page formats from the smallest to A2+ format (540 mm X 750 mm). The scanner includes Page Improver® software for processing scanned images. This combination is the perfect production tool for scanning newspapers.

With those 3 scanners and additional digitizing solutions, extends its product range and now answers every kind of digitizing need.

About i2S DigiBook: Building on 30 years of experience in image capture and processing, i2S DigiBook manufactures and markets a complete range of books scanners as well as softwares to answer the digitization needs of archives, libraries and service providers worldwide. Covering formats from DIN A5 to DIN A00 and featuring very high resolutions, i2S DigiBook's scanners are specially designed for digitizing fragile and valuable materials.
