

FOR IMMEDIATE RELEASE

e-Scan: The ultimate self-service face-up book scanner

i2S DigiBook will introduce a revolutionary face-up scanner for bound documents providing professional image quality and intuitive ergonomics for the public use.

Pessac, France – February 25, 2009: i2S DigiBook, a world leader in digitizing systems and solutions will launch the e-Scan at CeBIT, booth 53, Hall 3, on March 3-8 2009 in Hanover, Germany.

e-Scan is a compact and stand alone station that offers self-service scanning for the public market. The kiosk allows fast and easy scanning, of any kind of books and bound document including fragile documents. This new product has been designed for students in a university libraries who copy and print books and for people who attend public libraries, archives or others administrative centers. It would also save time to employees working in public or private companies who have bound documents to scan.

Self-service scanning becomes very simple and eco-friendly. The user places the book on the face-up scanner, launches the scan using the touch screen and leaves the library with the digital document on a USB key. The document can also be saved on a FTP, transferred to a network or printed.

e-Scan allows users to obtain scans of books or bound documents up to A3++ format (520mm X 360 mm). With an intuitive and user-friendly interface, it is equipped with a 15" touch screen, with real-time preview and completed scanned displayed. It offers high quality scans with 100% automatic adjustment (crop, auto focus, exposure time, white balance...). The user can adjust luminosity and contrast manually and enjoy embedded images processes for an optimal quality of digitalization.

"This fast and convenient scanning solution offers features that are unique on the market: an administrator mode that allows a full control of defaults settings, watermark and meta data for identification, tracking and copyright respect, RFID reader option to identify the document" says Alain Coste, DigiBook Business Unit Manager.

About i2S DigiBook: Building on 30 years of experience in image capture and processing, i2S DigiBook manufactures and markets a complete range of books scanners as well as softwares to answer the digitization needs of archives, libraries and service providers worldwide. Covering formats from DIN A5 to DIN A00 and featuring very high resolutions, i2S DigiBook's scanners are specially designed for digitizing fragile and valuable materials.
